PROFESSIONAL EXPERIENCE

Altera Digital Health, Remote — Software Engineer

March 2024 — Present

- Contributed to an Angular speech-to-text application integrating LLMs to transform live patient conversations into clinical documentation and automatically map generated text to clinical records.
- Developed an Angular configuration interface for customizing speech-to-text mappings and integrating them with a legacy .NET Framework application.
- Designed and implemented APIs and SQL stored procedures enabling data exchange between web applications and enterprise systems.
- Selected by leadership for high-priority initiatives requiring rapid understanding of a large, mature .NET codebase with complex, interconnected systems.
- Resolved 100+ software defects, including urgent customer-reported issues under tight deadlines.
- Delivered features from design through production, troubleshooting technical challenges and coordinating implementation across teams.

Altera Digital Health, Remote — Associate Software Engineer

March 2022 — May 2024

- Played a leading role in designing and implementing document formatting for a .NET feature that consolidated multiple medical records into a single, structured 24-hour clinical summary using C#, Visual Basic, and MSSQL.
- Enhanced clinical documentation workflows and resolved customer-reported defects across a large-scale Electronic Health Record (EHR) system.
- Implemented software enhancements to support compliance with evolving government regulations and healthcare requirements.

PROJECTS

Custom C++ Game Engine

February 2024 — Present

- Designed and implemented an Entity-Component-System (ECS) architecture for managing game objects and their behavior.
- Integrated SDL2, Box2D, and yaml-cpp to support input handling, physics simulation, and data serialization.
- Built core engine systems from the ground up, including the main game loop, window management, and rendering pipeline.

Unity Game Development

February 2018 — 2022

- Developed reusable C# systems and gameplay mechanics for Unity projects.
- Implemented features, tested gameplay, and diagnosed performance bottlenecks and software defects.

RESEARCH EXPERIENCE

West Chester University, West Chester PA — Data Analyst

August 2021 — December 2021

- Created graphs of spectral data from Chandra X-ray Observatory observations using S-Lang.
- Enhanced and maintained a codebase to automatically fit Gaussian functions to spectral and atomic data.
- Documented legacy code to improve clarity, usability, and maintainability of scripts for future use.

West Chester University, West Chester PA — HPC Astronomical Research Assistant

January 2020 — March 2021

- Composed Python scripts to automate final animations for presentations and papers.
- Utilized high performance computing to visualize the magnetic field & x-ray luminosity of supermassive stars using VisIt.

EDUCATION

West Chester University, West Chester PA

August 2018 — December 2021

- B.S. of Computer Science, Minor in Astronomy — *Summa Cum Laude*

TECHNICAL SKILLS

Languages:	C#, C++, Visual Basic, Java, TypeScript, SQL
Frameworks & Technologies:	.NET, .NET Framework, Angular, Unity, SDL2, Box2D
Tools & Practices:	Visual Studio, VS Code, Git, Agile Development
